AMENDMENTS TO THE CLAIMS

Please amend the claims as follows, without prejudice or disclaimer.

- (Currently amended) A method for inducing an immune response to a tumor antigen
 in an animal comprising a priming step wherein a tumor antigen is administered
 administering a tumor antigen in a first form directly into a lymph node and
 subsequently administering the tumor antigen in a second form that is different from
 the first form directly into a lymph node and a boosting step wherein the tumor
 antigen is administered in a second form directly into a lymph node, where the first
 and second forms are different.
- (Previously Amended) A method according to claim 1 wherein the tumor antigen is selected from the group consisting of CEA, gp100, the MAGE family of proteins, DAGE, GAGE, RAGE, NY-ESO 1, Melan-A/MART 1, TRP-1, TRP-2, tyrosinase, HER-2/neu, MUC-1, p53, KSA, PSA, PSMA, fragments thereof and modified versions thereof.

3 Cancelled

- (Previously Amended) A method according to claim 1 wherein at least one of said forms is a nucleic acid encoding the tumor antigen and the nucleic acid is selected from the group consisting of viral nucleic acid, bacterial DNA, plasmid DNA, naked DNA, and RNA.
- (Original) A method according to claim 4 wherein the viral nucleic acid is selected from the group consisting of adenoviral, alphaviral and poxviral nucleic acid.
- (Original) A method according to claim 5 wherein the poxviral nucleic acid selected from the group consisting of avipox, orthopox and suipox nucleic acid.

- (Original) A method according to claim 5 wherein the poxviral nucleic acid is selected from the group consisting of vaccinia, fowl pox, canarypox and swinepox nucleic acid.
- (Original) A method according to claim 5 wherein the poxviral nucleic acid is selected from the group consisting of MVA, NYVAC, TROVAC, and ALVAC nucleic acid.
- (Previously Amended) A method according to claim 1 wherein at least one of said forms is a nucleic acid encoding the tumor antigen and the nucleic acid is contained in a vector.
- (Original) A method according to claim 9 wherein the vector is a recombinant virus or bacteria.
- 11. (Original) A method according to claim 10 wherein the recombinant virus is selected from the group consisting of adenovirus, alphavirus and poxvirus.
- 12. (Original) A method according to claim 11 wherein the poxvirus is selected from the group consisting of avipox, orthopox and suipox.
- 13. (Original) A method according to claim 11 wherein the poxvirus is selected from the group consisting of vaccinia, fowlpox, canarypox and swinepox.
- (Original) A method according to claim 11 wherein the poxvirus is selected from the group consisting of MVA, NYVAC, TROVAC, and ALVAC.
- 15. (Previously Amended) A method according to claim 1 wherein at least one of said forms is a nucleic acid encoding the tumor antigen and the nucleic acid is contained in a cell

- 16. (Previously Amended) A method according to claim 1 wherein at least one of said forms is a nucleic acid encoding the tumor antigen and the nucleic acid is contained in a pharmaceutical composition.
- 17. (Previously Amended) A method according to claim 1 wherein the tumor antigen is selected from the group consisting of gp100, carcinoembryonic antigen (CEA), a fragment of gp100, a fragment of CEA, a modified version of gp100, and a modified version of CEA.
- (Previously Amended) A method according to claim 17 wherein the modified version of gp100 comprises at least the sequence IMDQVPFSY (SEQ ID NO: 1) or the sequence YLEPGPVTV (SEQ ID NO:2).
- (Previously Amended) A method according to claim 17 wherein the modified version of CEA comprises at least the sequence shown in Figure 8 (SEQ ID NO:112) or the sequence YLSGADLNL (SEQ ID NO:113).

20 Cancelled

- 21. (Original) A method according to claim 1 wherein the first form is a nucleic acid and the second form is a peptide.
- 22. (Original) A method according to claim 21 wherein the tumor antigen is selected from the group consisting of CEA. gp100, the MAGE family of proteins, DAGE, GAGE, RAGE, NY-ESO 1, Melan-A/MART 1, TRP-1, TRP-2, tyrosinase, HER-2/neu, MUC-1, p53, KSA, PSA, PSMA, fragments thereof, and modified versions thereof.
- (Original) A method according to claim 21 wherein the nucleic acid is selected from the group consisting of viral nucleic acid, bacterial DNA, plasmid DNA, naked DNA, and RNA.

- 24. (Original) A method according to claim 23 wherein the viral nucleic acid is selected from the group consisting of adenoviral, alphaviral and poxviral nucleic acid.
- 25. (Original) A method according to claim 24 wherein the poxviral nucleic acid selected from the group consisting of avipox, orthopox and suipox nucleic acid.
- 26. (Original) A method according to claim 25 wherein the poxviral nucleic acid is selected from the group consisting of vaccinia, fowl pox, canarypox and swinepox nucleic acid
- (Original) A method according to claim 26 wherein the poxviral nucleic acid is selected from the group consisting of MVA, NYVAC, TROVAC, and ALVAC nucleic acid

28-31. Canceled

- 32. (Previously presented) The method of claim 1 wherein both a humoral and cell mediated immune response greater than that produced by subcutaneous immunization are observed.
- 33. (Previously presented) The method of claim 1 wherein the tumor antigen is not coadministered with an adjuvant.
- 34. (New) The method of claim 1 wherein the animal is human.
- 35. (New) The method of claim 1 wherein the first and second forms of the tumor antigen are administered to the same lymph node.
